

LOOK FAMILIAR? YOUR INDOOR AIR COULD BE DIRTY!

IT'S TIME TO START BREATHING CLEAN, FRESH AIR INSIDE YOUR HOME.

CONTROL DUST AND OTHER CONTAMINANTS BY CLEANING THE CENTRAL AIR SYSTEM.

According to the EPA, levels of air pollution inside the home can be two to five times more polluted than outdoor levels. Household dust can contain mites, mold, mildew, pollen and animal dander- which are cycled through the central air system and air ducts circulating throughout the air you breathe.

WE INSPECT YOUR AIR DUCTS TO SHOW YOU WHAT YOU COULD BE BREATHING.

Using advanced video technology, we inspect your home's air ducts. We look for dirt, debris, animal droppings, mold, moisture and more to help determine if cleaning is beneficial. If cleaning is needed to help improve your home's air quality we will follow up with after inspection to show you our work.

HOW YOUR DUCTS ARE CLEANED MAKES A DIFFERENCE!

There are two methods to effectively clean air ducts. One method is the Negative Air Method, this involves blocking off all your returns and vents then cutting an access hole to attach a large hose which sucks out all the debris after everything has been agitated. The other method is Brush and Vacuum. The Brush and Vac method simultaneously scrubs and vacuums your ducts, much like your vacuum cleaner on your floors. This method works by going into each register/vent inside your home so no cutting into your air ducts is necessary.
